Mixing Powders with  
Sound Waves...

# The Sonic Mixer

All components fit into the carrying case, which is 33" x 21" x 11."

MacroSonix introduces a revolutionary new product for the powder processing industries: the Sonic Mixer. A high intensity powder blender, the Sonic Mixer harnesses the energy of super saturated sound waves with complex mechanical forces to quickly mix powders in a portable chamber. A sound enclosure attenuates to below 72 dB.

No moving parts in the mixing chamber are needed to achieve the high shear, uniform mixing. Variable fill levels ranging from less than 10% to more than 75%. Clean up is quick and easy. Addressing containment issues, the Sonic Mixer's secure mixing chamber keeps powders in and contaminants out.

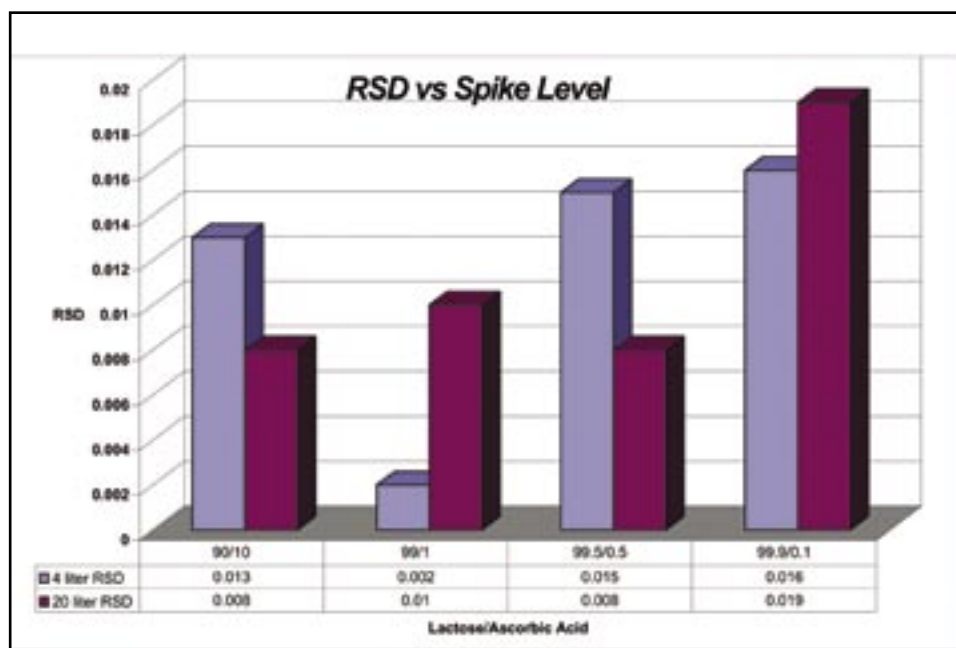

The Sonic Mixer is attractively priced when compared to other functionally equivalent powder mixers. Maintenance is virtually eliminated, and the three-year warranty can be extended to five years. The Sonic Mixer is now sold in 2 liter, 20 liter and 200 liter sizes. Larger sizes are under development.
